Webinar

RIPE NCC Learning & Development

RIPE Atlas coverage

Take the Poll!

How much experience do you have
with **RIPE Atlas**?

P1

Take Another Poll!

What is an “**active measurement**”?

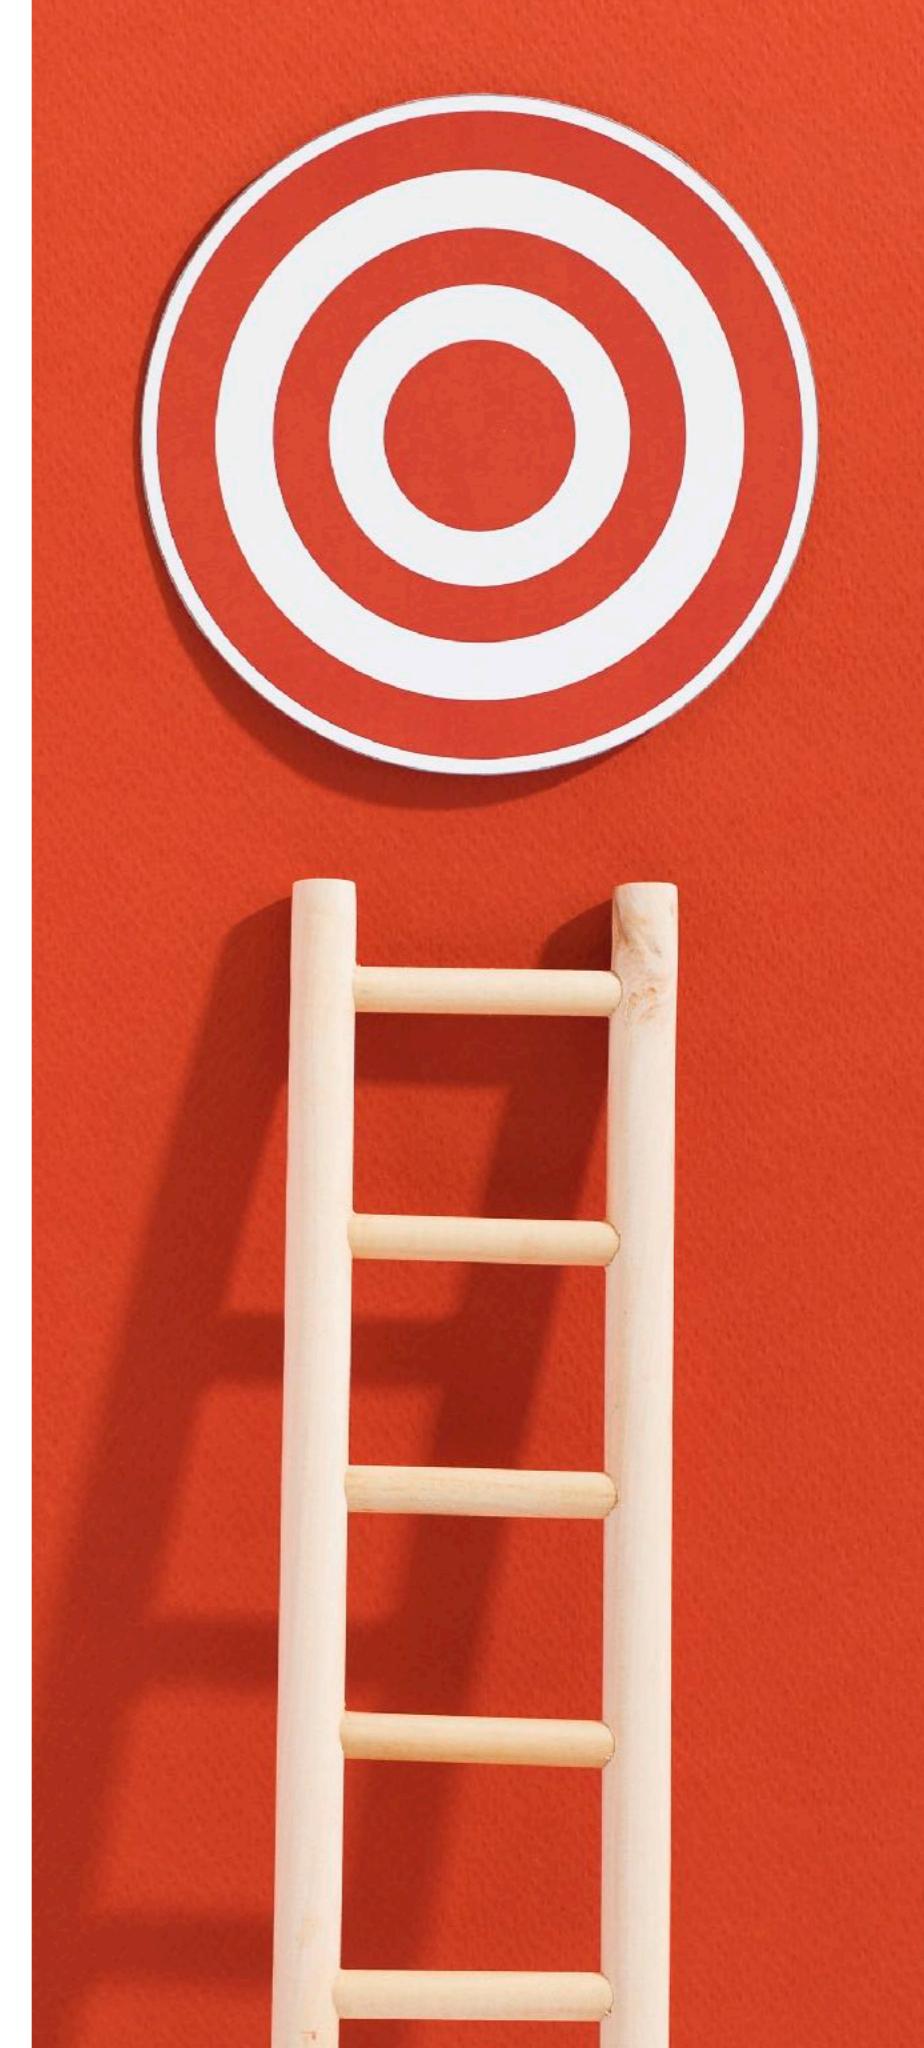

⌚ 2 min.

P1

Course Goals

- Monitor your network and troubleshoot in with **RIPE Atlas**
- Create specific tailor-made **measurements** that suit your exact needs using API calls or the command line interface

Prerequisites

- We assume you have already used RIPE Atlas
- Do you have a **RIPE NCC Access** account?
 - If not - quickly create one: *access.ripe.net*
- Do you have credits to spend?

Overview

Introduction to RIPE Atlas

Creating a Measurement

Demo A: Creating a Measurement

Command Line Interface (CLI) Toolset

DEMO B: Using RIPE Atlas CLI

Monitoring

Exercise A: Kahoot

Introduction to RIPE Atlas

Section 1

An Introduction

- RIPE Atlas is a **global active measurements platform**
- Goal: view Internet reachability
- Probes hosted by volunteers
- Data **publicly available**

RIPE Atlas Measurements

- Built-in global measurements towards root nameservers
 - Visualised as Internet traffic maps
- Built-in regional measurements towards “anchors”
- **Users** can run customised measurements
 - ping, traceroute, DNS, SSL/TLS, NTP and HTTP*

Probes and Anchors

- **11,000+** probes connected (**600+** RIPE Atlas Anchors)
- **10,000+** results collected per second
- **23,000+** measurements currently running

RIPE Atlas probe

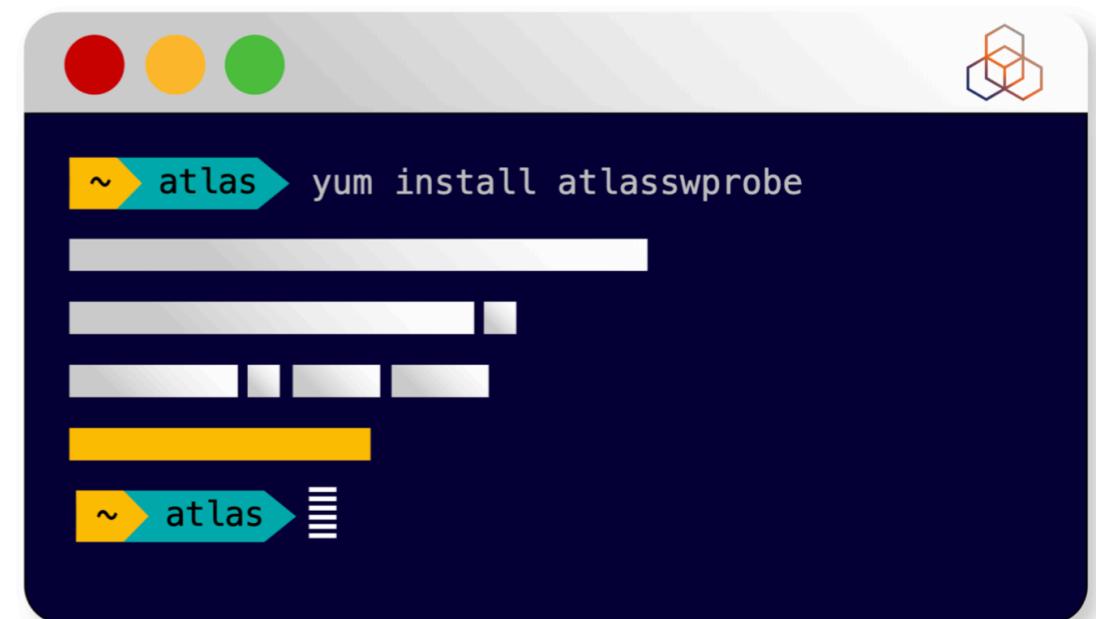

RIPE Atlas anchor

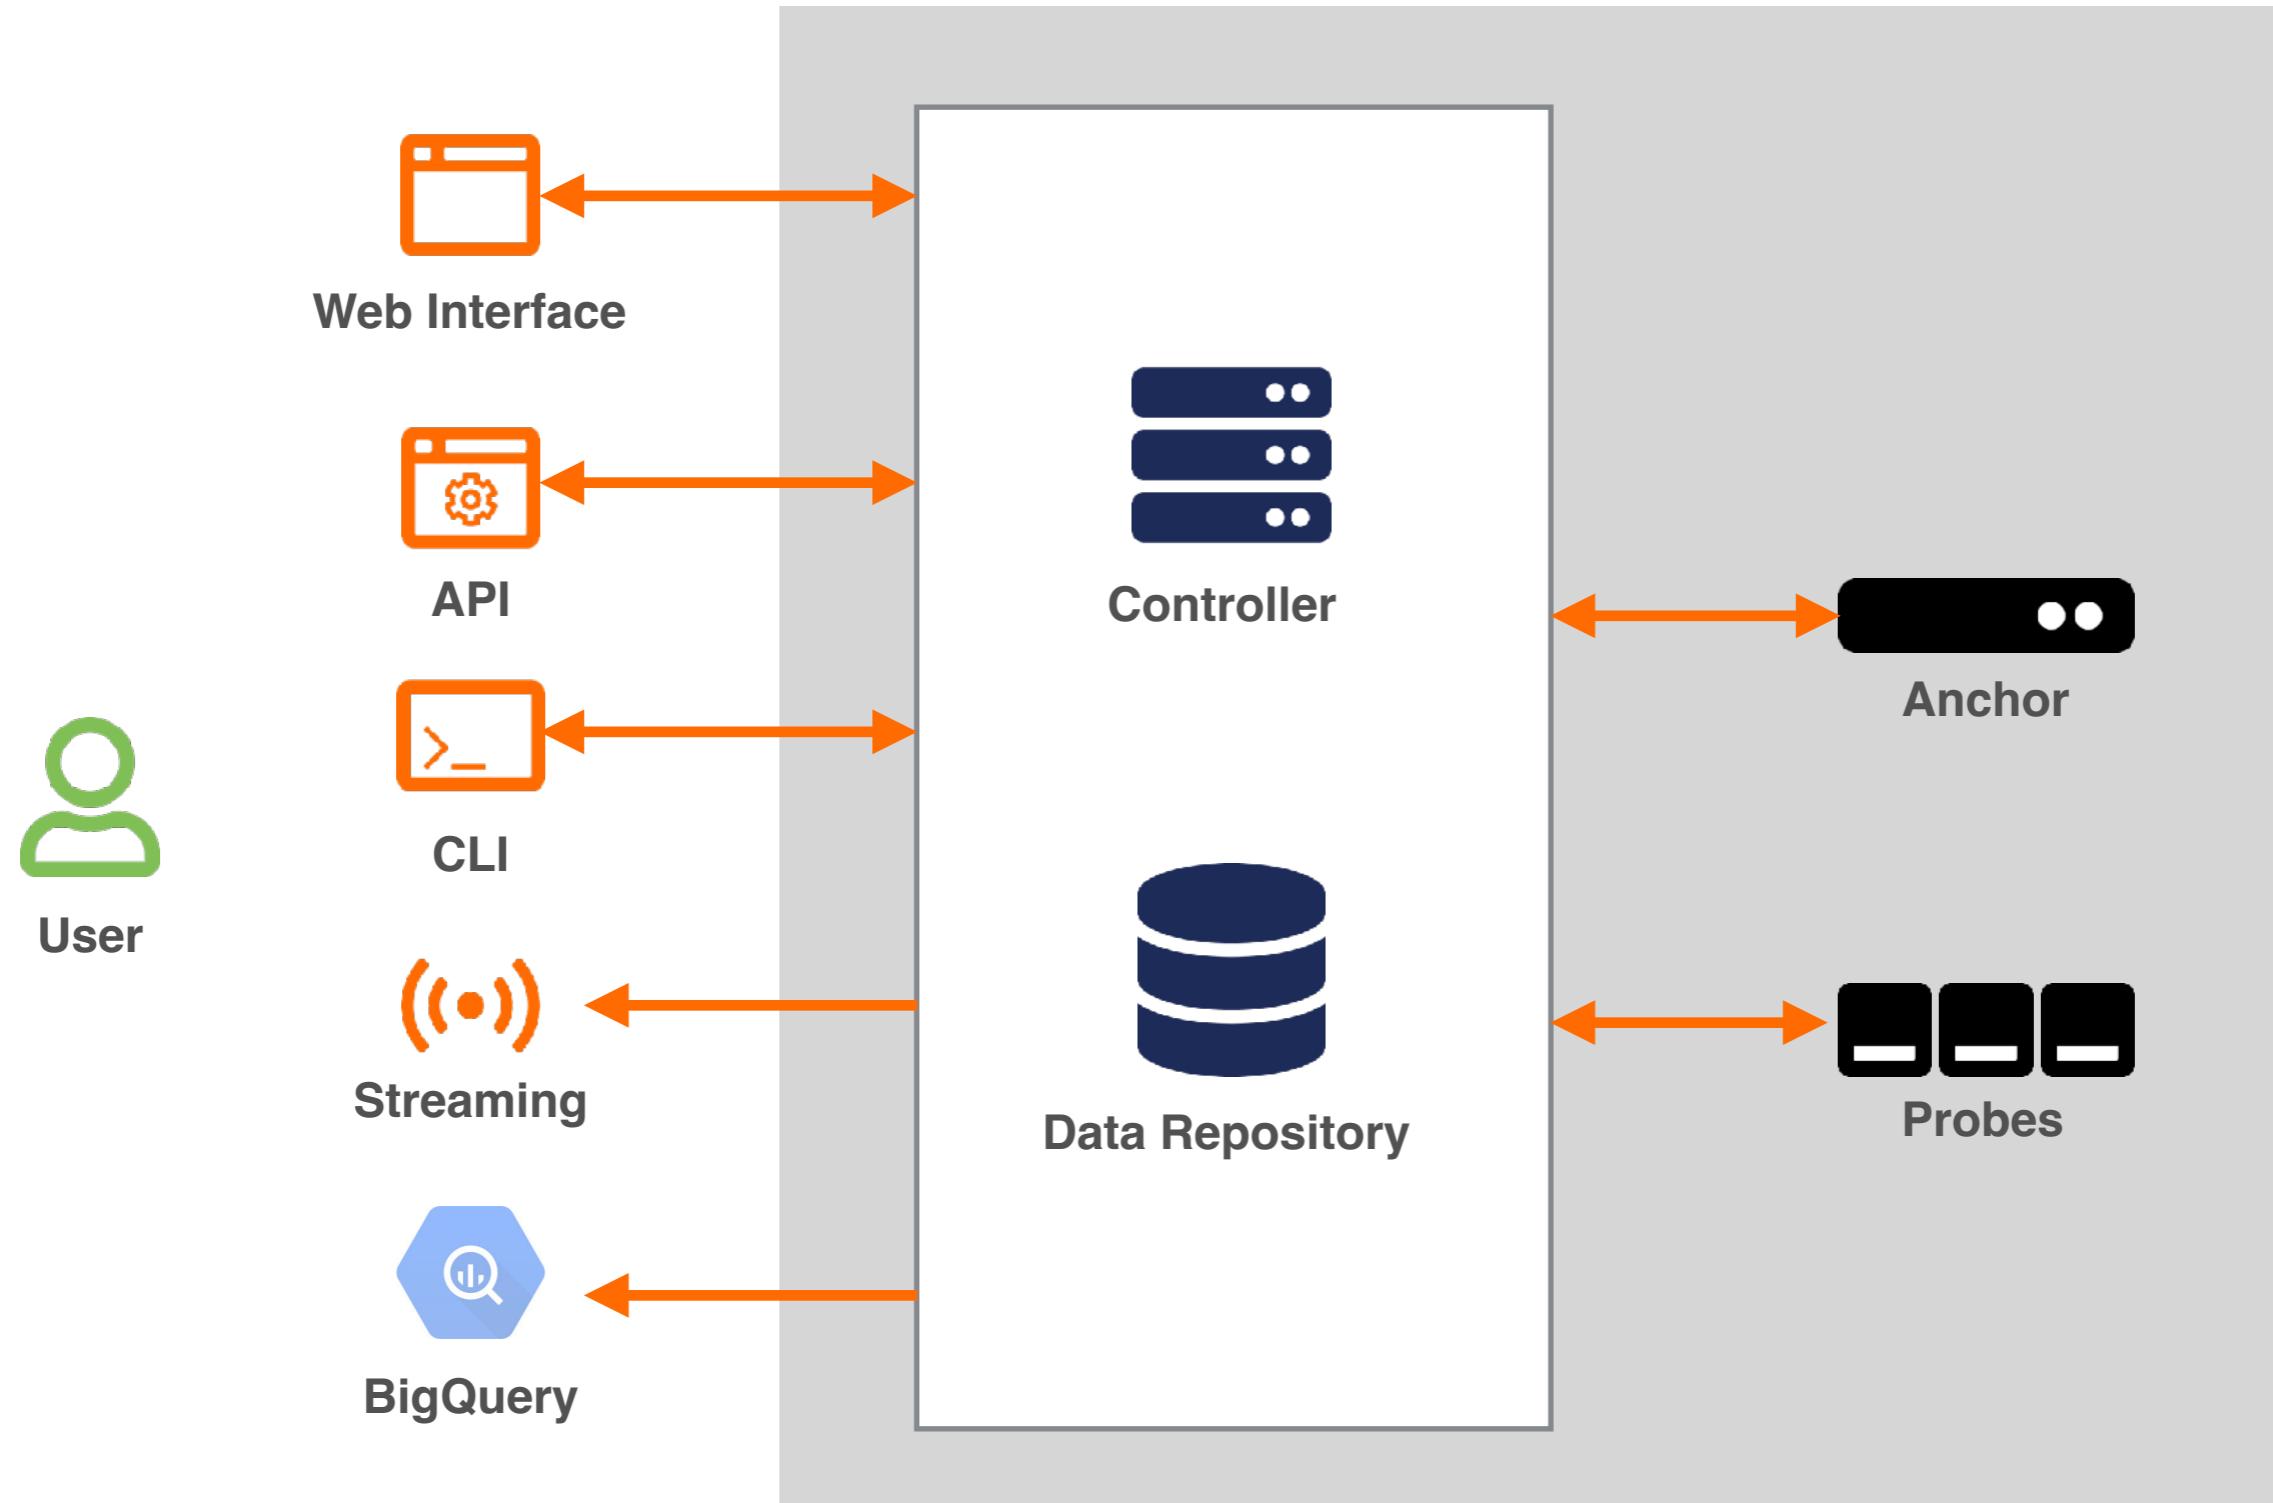

New: RIPE Atlas Software Probes

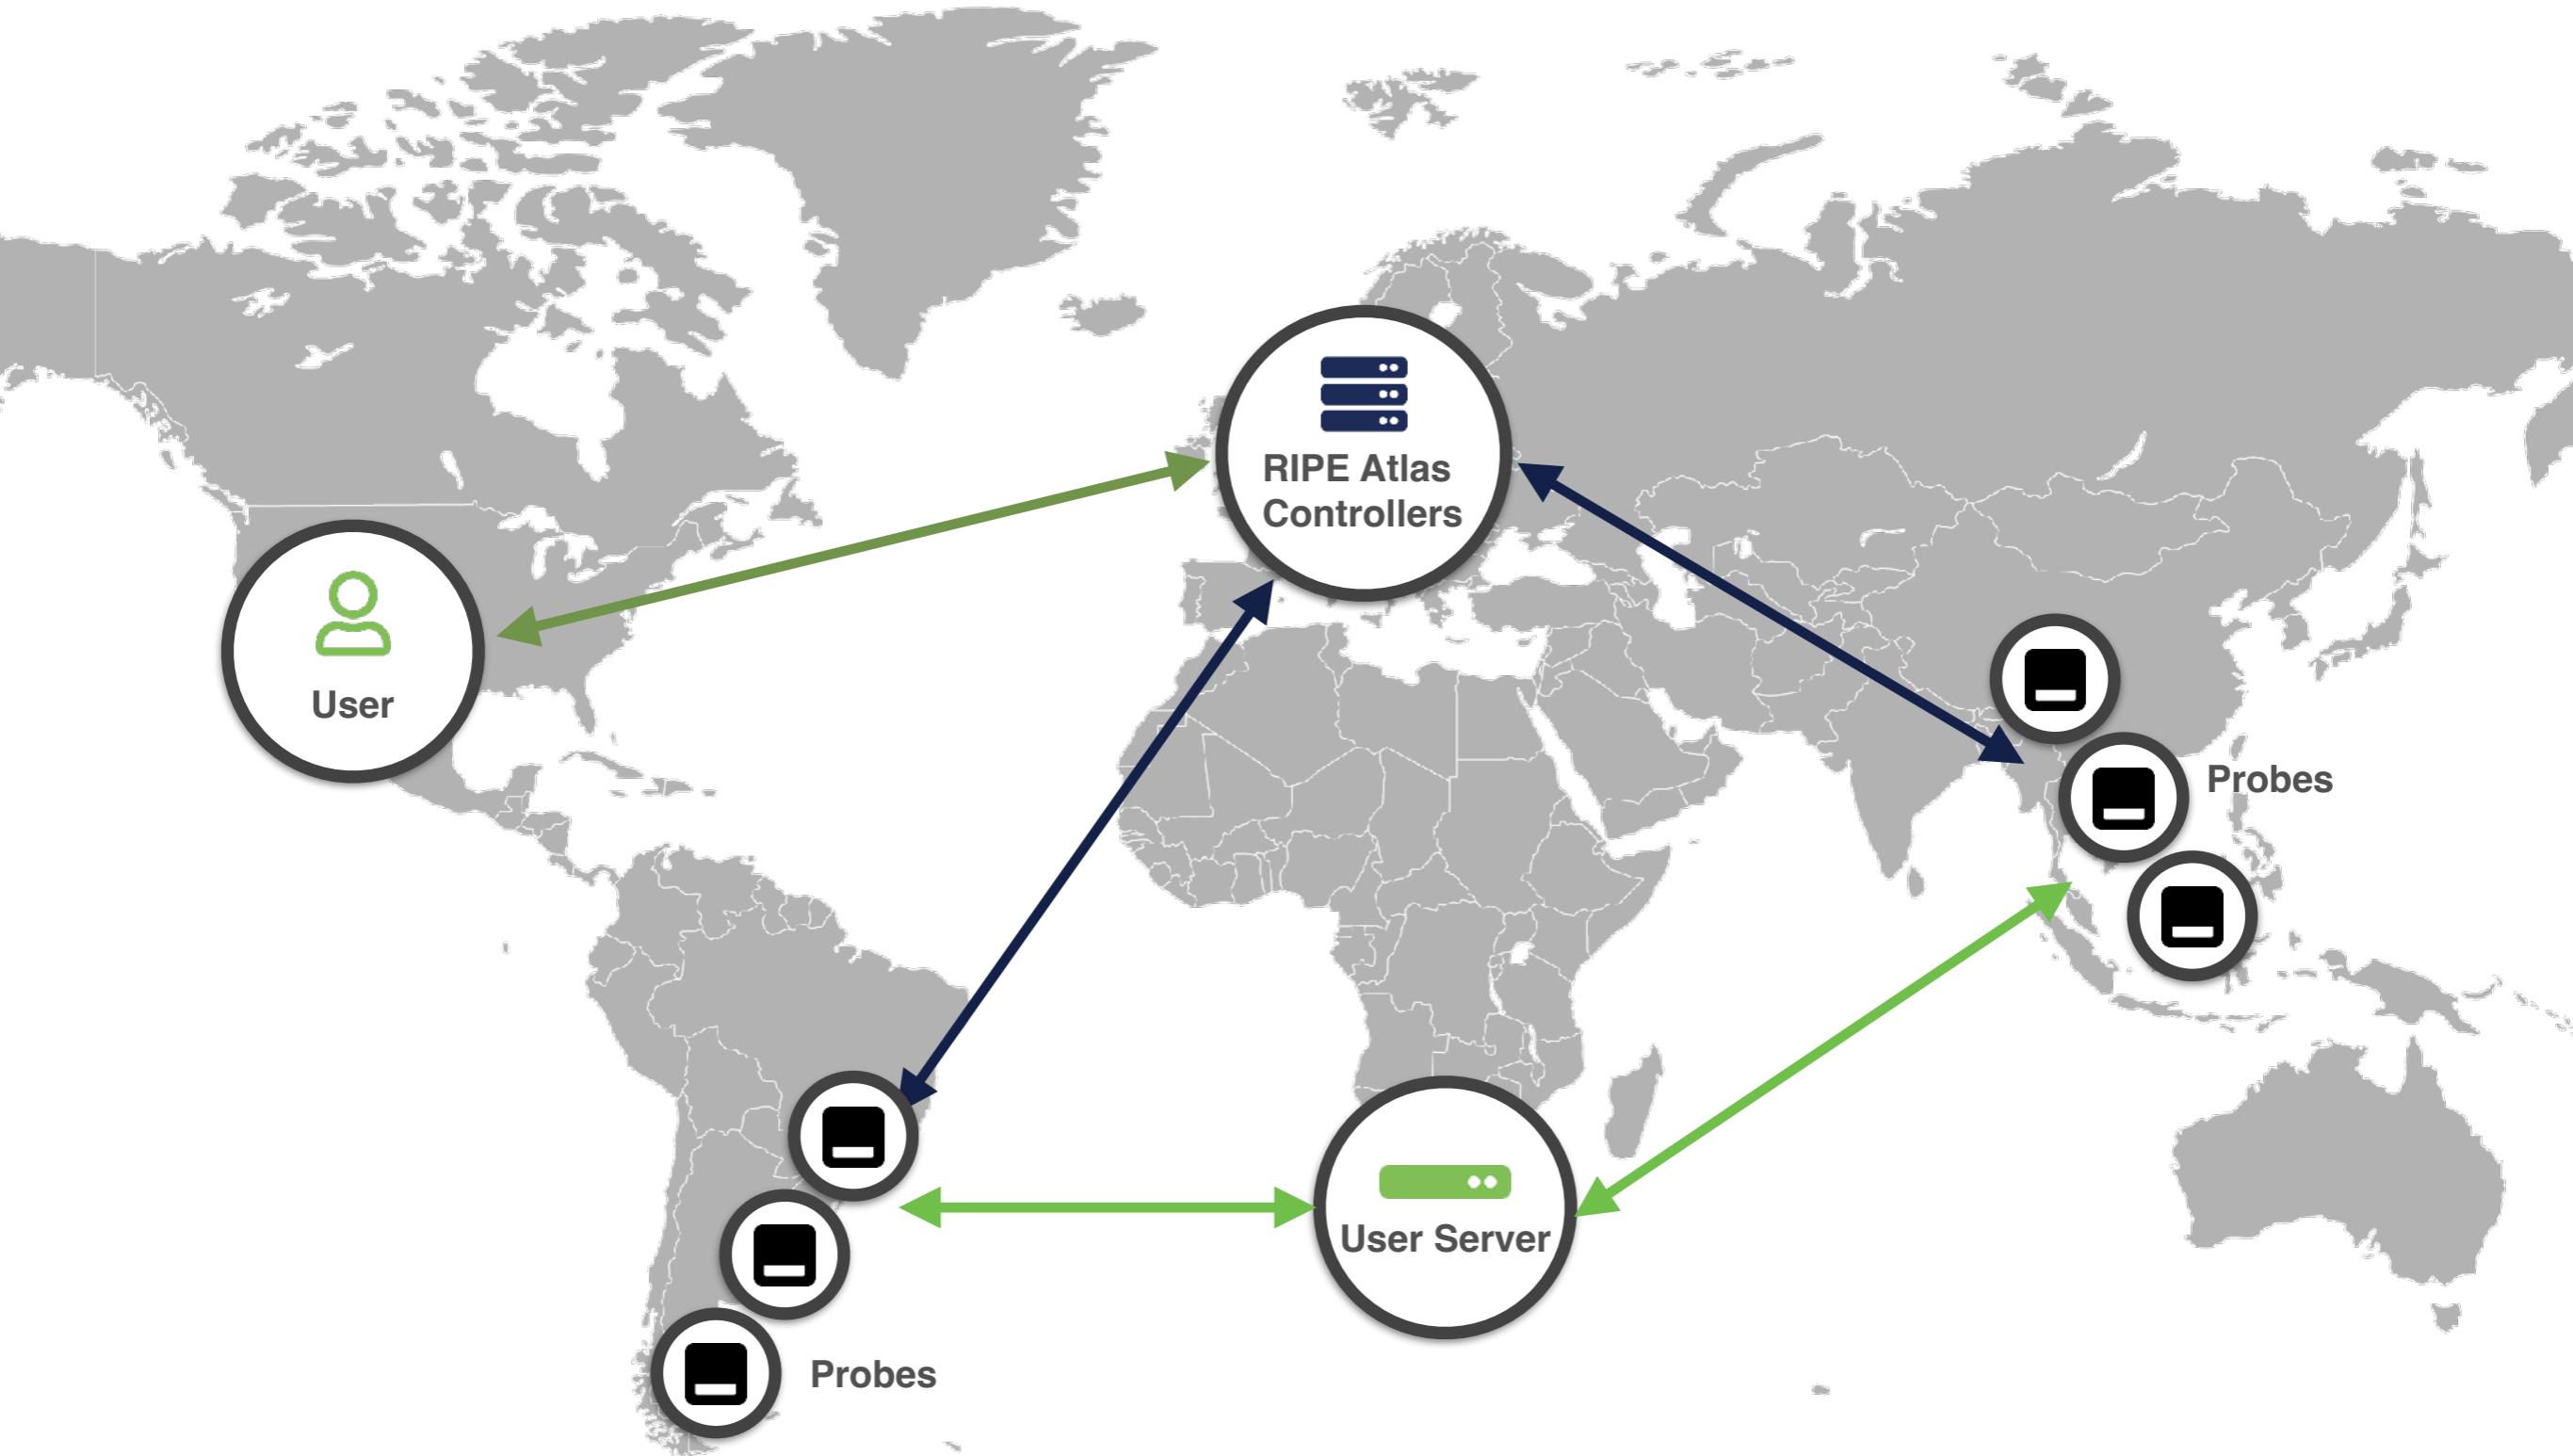

- Software packages that work like regular probes
- Install and run on your (virtual), machines, routers, servers etc
- Currently supporting:
 - CentOS 7 and 8; Debian (9 and 10) and Raspbian; Docker; Turris Routers
- Further information: atlas.ripe.net/docs/software-probe/

Apply to host a software probe:
<https://atlas.ripe.net/apply/>

RIPE Atlas

Steps to Take

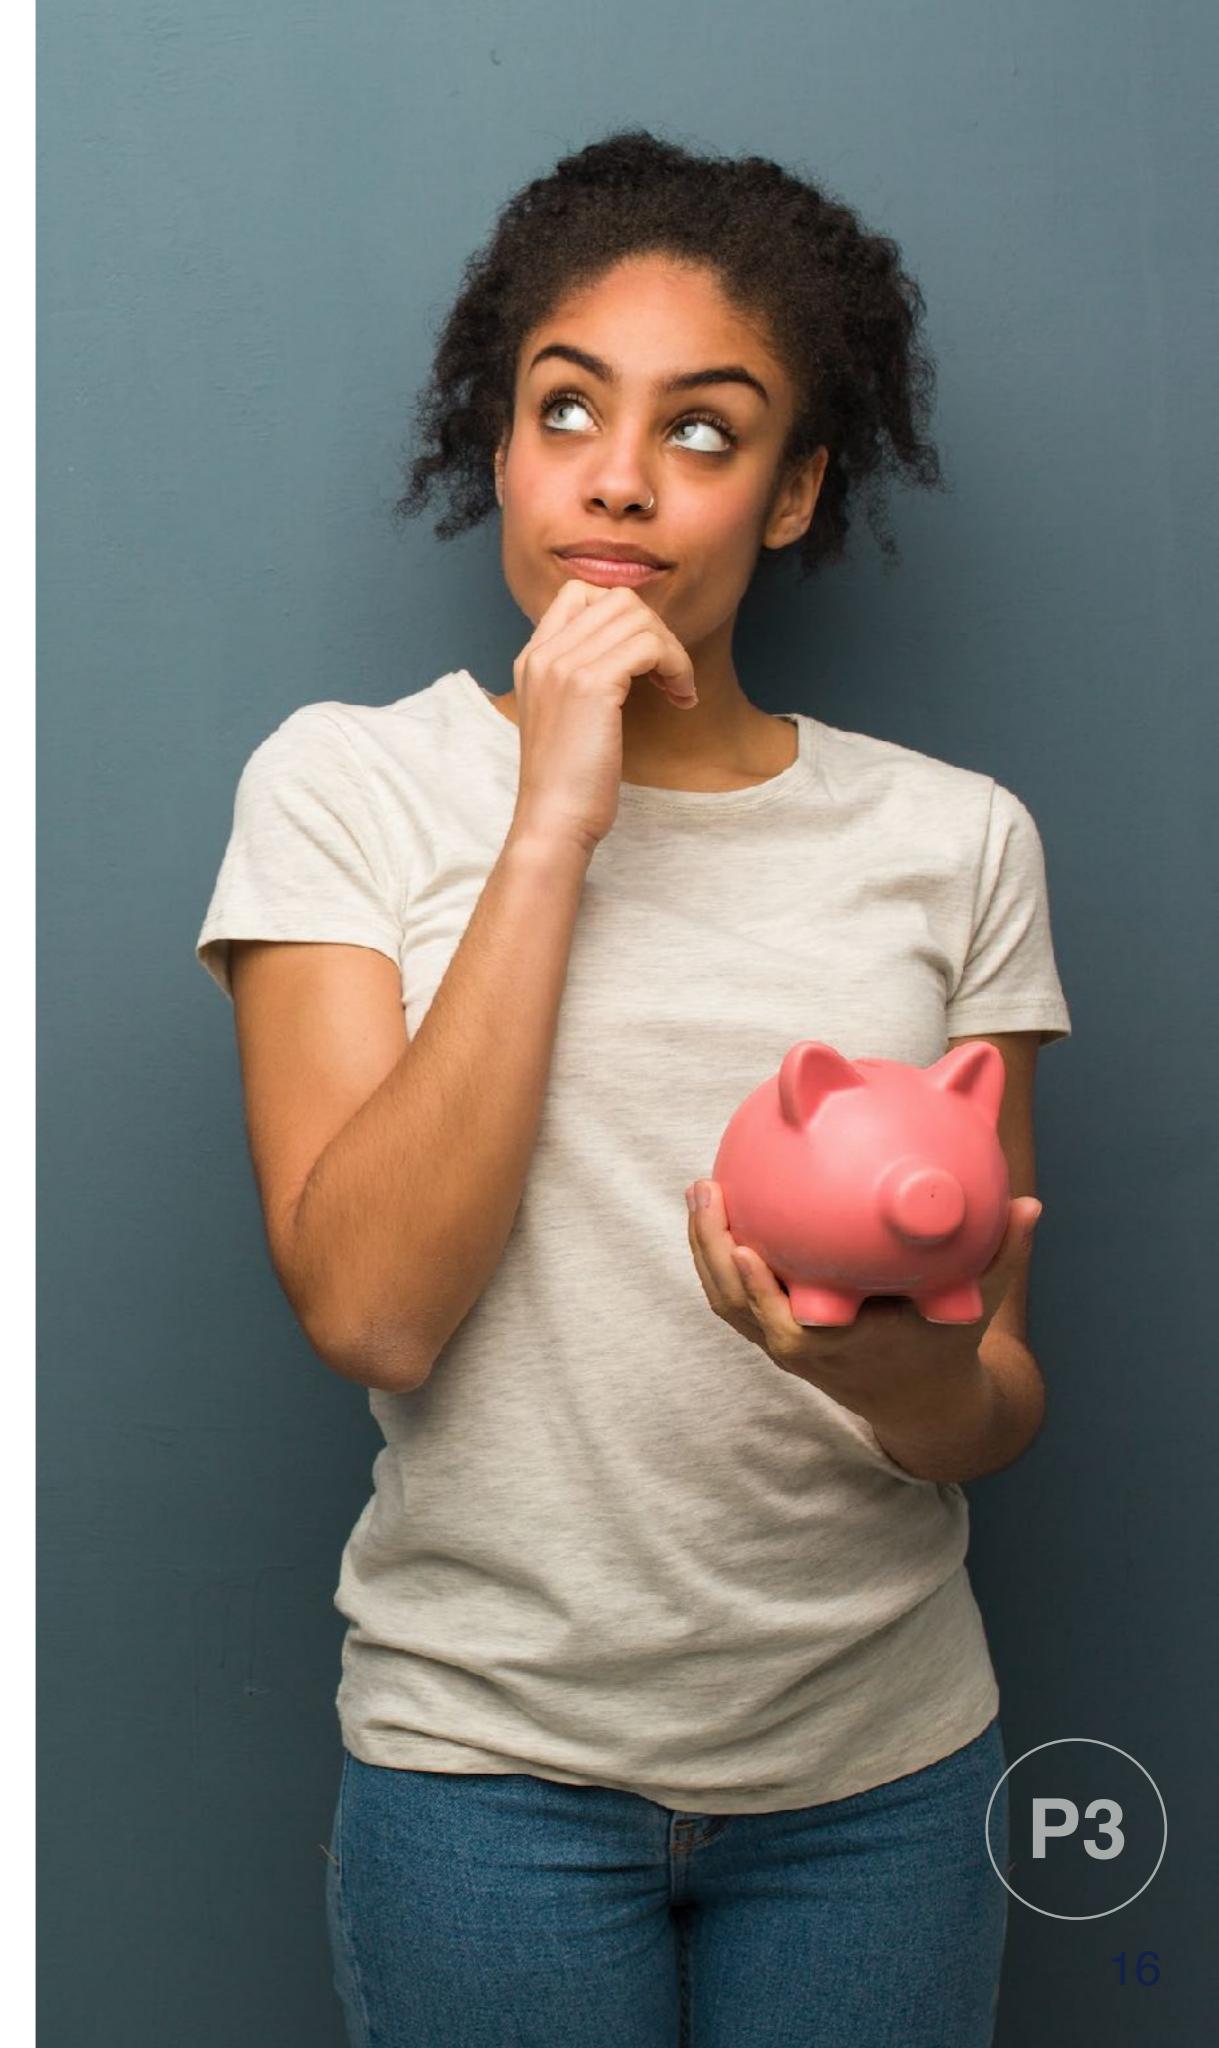

1. Get a probe (optional)
2. Get a **RIPE NCC Access** account
3. Register the probe (if you received one)
4. Get credits
5. **Create measurements** as needed
6. **Troubleshoot and monitor** your network

Take the Poll!

Can you get a
RIPE Atlas probe for free?

⌚ 2 min.

P3

16

Why?

- Why get a free RIPE Atlas probe?
 - to help the community effort in building the largest Internet measurement network: RIPE Atlas
 - to help everyone and yourself to create better measurements
- Why get credits and create a RIPE NCC Access Account?
 - to be able to create measurements and troubleshoot

Questions

Creating a Measurement

Section 2

Benefits of Your Own Measurements

- *Customer problem:* cannot reach your server
 - Schedule measurements (**pings** or **traceroutes**) from up to 1,000 RIPE Atlas probes **worldwide** to verify where the problem is;
- **Measuring** packet loss on suspected “bad” link;
- **Testing** anycast deployment.

Credits System

- Measurements cost credits
 - ping = **10 credits**, traceroute = **20**, etc.
- Why? **Fairness** and to **avoid overload**
- Spending limit
- Max number of measurements

How Can you Earn Credits?

- Hosting a RIPE Atlas probe
- Being a RIPE NCC member
- Hosting an anchor
- Sponsoring probes

Credits Overview

My Atlas > Credits

3,478,722
-3,600.00 credits / hour

Give credits to someone

Scheduling a Measurement

- Log in to **atlas.ripe.net**
- Four methods:
 1. Quick and easy
 2. Advanced GUI usage
 3. API (curl and JSON code)
 4. CLI

1. Quick and Easy

Create a New Measurement

Step 1 Definitions

1. Target: bbc.co.uk

2. Address Family*: IPv4

Packets: 3

Size: 48

Description: Ping measurement to bbc.co.uk

Interval: 240

Resolve on Probe:

[Advanced Options](#)

[+ Ping](#) [+ Traceroute](#) [+ DNS](#) [+ SSL](#) [+ HTTP](#) [+ NTP](#)

Step 2 Probe Selection

Worldwide 10 [×](#)

[+ New Set - wizard](#) [+ New Set - manual](#) [+ IDs List](#) [+ Reuse a set from a measurement](#)

Step 3 Timing

This is a One-off:

Start time (UTC): As soon as possible [🕒](#)

Stop time (UTC): Never [🕒](#)

[Measurement API Compatible Specification](#)

3. Create My Measurement(s)

Costs summary

Daily cost: 10800 credits

You will run out of credits in about 124 days

2016-03-29 2016-04-09 2016-04-19 2016-05-29

Balance Total Expenses

Users who will supply credits for this measurement: ferenc@ripe.net

2. Use GUI

- Mostly used for a periodic, long-term measurement
 - Or “One-off”
- Choose type, target, frequency, start/end time, # of probes, region...
- Each measurement will have **unique ID**
- “**API Compatible Specification**” is generated too

2. Advanced GUI

Create a New Measurement

Step 1 Definitions

A Ping measurement to bbc.co.uk
B Target: bbc.co.uk
C Address Family*: IPv4
Packets: 3
Size: 48
D Advanced Options
Description: Ping measurement to bbc.co.uk
Interval: 240
Resolve on Probe: Force the probe to do DNS resolution

E Step 2 Probe Selection
Worldwide 10
+ New Set - wizard

F Step 3 Timing
This is a One-off:
Start time (UTC): As soon as possible
Stop time (UTC): Never

G Create My Measurement(s)

Costs summary
Daily cost: 10800 credits
You will run out of credits in about 124 days
Graph showing Balance and Total Expenses over time:
2016-08-29, 2016-09-05, 2016-09-11, 2016-09-17, 2016-09-23
Legend: Balance (blue), Total Expenses (orange)
Users who will supply credits for this measurement: ferenc@ripe.net

> Measurement API Compatible Specification

3. Use API

- **Using command-line and scripting:**
 - Application Programming Interface (API)
 - <https://atlas.ripe.net/docs/api/v2/manual/measurements/types/>
 - <https://atlas.ripe.net/keys/>
- **You will need API keys**
 - To create measurements without logging in
 - To securely share your measurement data

3. API Compatible

Create a New Measurement

Step 1 Definitions

Ping measurement to bbc.co.uk

Target: bbc.co.uk
An IP address or hostname

Address Family*: IPv4

Packets: 3

Size: 48

Description: Ping measurement to bbc.co.uk

Interval: 240

How often this should be done (seconds between samples). Note that this value is ignored for one-off measurements.

Resolve on Probe: Force the probe to do DNS resolution

[Advanced Options](#)

Costs summary

Daily cost: 10800 credits

You will run out of credits in about 124 days

Step 2 Probe Selection

Worldwide 10

[+ New Set - wizard](#) [+New Set - manual](#) [+ IDs List](#) [+ Reuse a set from a measurement](#)

Step 3 Timing

This is a One-off:

Start time (UTC): As soon as possible

Stop time (UTC): Never

[Measurement API Compatible Specification](#)

Create My Measurement(s)

[cont...] 3. API Compatible

▼ Measurement API Compatible Specification

```
curl --dump-header - -H "Content-Type: application/json" -H "Accept:  
application/json" -X POST -d '{  
    "definitions": [  
        {  
            "target": "nrc.nl",  
            "af": 4,  
            "packets": 3,  
            "size": 48,  
            "description": "Ping measurement to nrc.nl",  
            "interval": 240,  
            "resolve_on_probe": false,  
            "skip_dns_check": false,  
            "type": "ping"  
        }  
    ]  
}'
```

Copy to clipboard

Create API Key

1. Go to MyAtlas
2. Click on “Create an API Key”
3. Choose type: “create a new user-defined measurement”
4. “Object” is not applicable (N/A) for this type
5. Give it a label

Looking Up Measurements Results

Go to “Measurements, Maps and Tools” > “Measurements”

The screenshot shows the RIPE Atlas interface. On the left is a dark sidebar with various navigation links: Home, About RIPE Atlas, Get Involved, Probes and Anchors, Measurements, Maps..., Measurements (which is highlighted with an orange border), Internet Maps, Tools, Resources, RIPE NCC Members, My Atlas (with a dropdown for Credits, Keys and more), Credits, API Keys, Messages, and Anchors. At the top right are buttons for Help, Grid View, and Profile. The main area is titled "Measurements" and contains a table of measurement results. The table has columns for ID, Type, Target, Description, Probes, Interval, Time (UTC), and Status. The table lists several measurements, mostly Ping types to various targets like wikipedia.org and nu.nl, with details such as probe counts (e.g., 49, 91, 50, 10, 2), intervals (e.g., one-off, 240 s, 900 s), and times (e.g., 2020-10-05 09:35, 2020-07-14 09:50). A green button at the top right says "+ Create a Measurement".

RIPE Atlas Data on BigQuery

- RIPE Atlas measurement results available via Google BigQuery
- General purpose data warehouse
- SQL query language on top
- Great for rapid investigation
- Build complex analyses, or just heavy filtering prior to local analysis

<https://github.com/RIPE-NCC/ripe-atlas-bigquery/>

<https://labs.ripe.net/tools/>

The screenshot shows the Google Cloud Platform BigQuery interface. The left sidebar lists resources under the project 'serious-research-project', specifically the 'ripencc-atlas' dataset which contains 'measurements' and 'samples' tables. The 'samples' table is currently selected. The main area is the 'Query editor' where a SQL query is being run:

```
1 select msm_id, count(*) result_count
2 from `ripencc-atlas`.samples.ping
3 group by msm_id
4 order by result_count desc
```

The query is valid, and the results are displayed in the 'Query results' table:

Row	msm_id	result_count
1	1012	40299
2	1016	40185
3	1015	40102
4	1004	40058
5	1030	40046
6	1009	40038
7	1010	39993
8	1019	39992
9	1005	39924
10	1013	39906
11	1031	39878

Take the Poll!

Can you create as many measurements as you want?

⌚ 2 min.

P4

Questions

Demo A

Create a Measurement

Exercise

We will create a **ping** measurement:

- Involving **ten probes**
- To a target of your choice
- Source is **your country**
- Duration of **two days**

Tasks

1. *Warm-up:* Create a measurement using the GUI
2. Create API Key
3. Schedule a measurement using the API

Task 1: Use Web Interface

- Once you generate a measurement, copy “**API Compatible Specification**” to text file
- Take note of the **measurement ID**!

create
measurement

The screenshot shows the RIPE Atlas web interface with the following details:

- Left sidebar:** Home, About RIPE Atlas, Get Involved, Probes and Anchors, Measurements, Maps..., Measurements (highlighted), Create Measurement (button circled in orange), Internet Maps, Tools, Resources, RIPE NCC Members, My Atlas (Credits, Keys and more).
- Main content area:**
 - Create a New Measurement** title.
 - Step 1 Definitions:** A section asking to select the type of measurement. Buttons for +Ping, +Traceroute, +DNS, +SSL, +HTTP, and +NTP are available.
 - Step 2 Probe Selection:** Set to Worldwide, 10 probes. Options: +New Set - wizard, +New Set - manual, +IDs List, +Reuse a set from a measurement.
 - Step 3 Timing:** Options for One-off (unchecked), Start time (UTC): As soon as possible, Stop time (UTC): Never.
 - Measurement API Compatible Specification:** A link to view the generated API spec.
 - Create My Measurement(s)** button at the bottom.
- Right sidebar:** Costs summary (Please define a measurement), Users who will supply credits for this measurement (ferenc@ripe.net selected), and a general note about defining a measurement.

Task 2: Create API key

1. Click on “Create an API Key”
2. Permission: “schedule a new measurement”
3. “Target” is not applicable (N/A) for this type

The screenshot shows the RIPE Atlas interface. On the left, there's a dark sidebar with various navigation links: Home, About RIPE Atlas, Get Involved, Probes and Anchors, Measurements, Maps..., Measurements, Create Measurement, Internet Maps, Tools, Resources, RIPE NCC Members, My Atlas (Credits, Keys and more), and Credits. The 'API Keys' link at the bottom of the sidebar is highlighted with a red oval. The main content area is titled 'API Keys' and contains a table of API keys. The table has columns for UUID, Created, Grants, Label, Valid From, Valid To, and Enabled. There are 31 entries listed, showing grants like 'Schedule a new measurement' and labels like 'Test-KSA-course' and 'Green-test-in-june'. The 'Enabled' column shows several checkmarks. At the bottom of the table, it says 'Showing 1 to 10 of 31 entries' and has a navigation bar with 'Previous', page numbers 1 through 4, and 'Next'.

API key

[cont...] Task 2: Create API key

4. Give it a label
5. Give it a duration of validity (leave empty for defaults)
6. “Key” value to be passed on to the API call (next step)

Task 3: Use API

Schedule a measurement using API

- Use the “key” you just generated
- Hint: copy and past API call syntax from the measurement generated by the GUI

An example:

```
curl -H "Content-Type: application/json" -H "Accept: application/json" -X  
POST -d '{ "definitions": [ { "target": "ping.xs4all.nl", "description":  
"My First API Measurement", "type": "ping", "af": 4 } ], "probes":  
[ { "requested": 10, "type": "country", "value": "RS" } ] }' https://  
atlas.ripe.net/api/v1/measurement/?key=YOUR_API_KEY
```

Task 3: Use API

```
Terminal Shell Edit View Window Help 0 b/s 0 b/s 0% 100% wo 12:  
becha — bash — 72x24  
air-becha:~ becha$ curl -H "Content-Type: application/json" -H "Accept: application/json" -X POST -d '{ "definitions": [ { "target": "ping.xs4all.nl", "description": "My First Measurement", "type": "ping", "af": 4 }, { "probes": [ { "requested": 10, "type": "country", "value": "RS" } ] } ]' https://atlas.ripe.net/api/v1/measurement/?key=7b4c3441-4504-4d83-9ed7-fbf1a007d060  
{"measurements": [2421551]}air-becha:~ becha$
```

- Source, if you want to contribute:
 - <https://github.com/RIPE-NCC/ripe-atlas-tools/>

Installing the CLI tool

Install RIPE Atlas Tools

- OSX:
 - `sudo easy_install pip`
 - `sudo pip install ripe-atlas-tools`
- Linux:
 - Available from many package repositories
 - ...or same as in OSX

Installing the CLI tool

Configure RIPE Atlas CLI

- Reuse the API key of the previous exercise
 - Or create a new one at <https://atlas.ripe.net/keys/>
- Configure your CLI
 - `ripe-atlas configure --set authorisation.create=MY_API_KEY`

Fetch an Existing Measurement

Fetch the ping measurement 2340408

- ripe-atlas report 2340408

Search probes

- **Search all probes in AS 3333**
 - ripe-atlas probe-search --asn 3333
- **Show specific fields**
 - ripe-atlas probe-search --asn 3333 --field asn_v6 --field country --field description --field status

Create a Measurement

Create a ping measurement to wikipedia.org

- One-off, default parameters
- ripe-atlas measure ping --target wikipedia.org

Looking good! Your measurement was created and details about it can be found here:

<https://atlas.ripe.net/measurements/3499718/>

Connecting to stream...

```
48 bytes from probe #18433 94.112.176.45    to 91.198.174.192 (91.198.174.192): ttl=50 times:41.979, 41.492, 40.769,
48 bytes from probe #20111 37.151.230.180    to 91.198.174.192 (91.198.174.192): ttl=57 times:100.511, 100.136, 100.325,
48 bytes from probe #25003 176.193.48.211    to 91.198.174.192 (91.198.174.192): ttl=59 times:47.967, 47.476, 47.403,
48 bytes from probe #20313 5.199.160.9      to 91.198.174.192 (91.198.174.192): ttl=58 times:36.501, 36.245, 36.285,
48 bytes from probe #22573 89.176.43.44     to 91.198.174.192 (91.198.174.192): ttl=52 times:28.747, 27.712, 28.446,
48 bytes from probe #19413 89.71.47.56      to 91.198.174.192 (91.198.174.192): ttl=51 times:49.89, 49.779, 50.277,
48 bytes from probe #18635 78.52.132.137    to 91.198.174.192 (91.198.174.192): ttl=57 times:37.462, 38.095, 37.73,
48 bytes from probe #23223 62.65.126.46     to 91.198.174.192 (91.198.174.192): ttl=53 times:23.169, 23.412, 33.067,
48 bytes from probe #17511 87.81.148.2      to 91.198.174.192 (91.198.174.192): ttl=56 times:13.281, 12.885, 13.039,
48 bytes from probe #12584 46.175.22.202    to 91.198.174.192 (91.198.174.192): ttl=59 times:36.073, 35.788, 35.883,
```

Other Examples of Ping

Geo-specific from 20 probes from Canada:

- ripe-atlas measure ping --target example.com --probes 20 --from-country ca

20 Canadian probes that definitely support IPv6:

- ripe-atlas measure ping --target example.com --probes 20 --from-country ca --include-tag system-ipv6-works

Create a recurring measurement:

- ripe-atlas measure ping --target example.com --interval 3600

Take a Poll!

How do you identify yourself (for credit accounting) when using CLI?

Questions

Demo B

Using RIPE Atlas CLI

Search Probes

Use the **traceroute** command to test the reachability of

- wikipedia.org
- on TCP port 443
- from **20 probes**
- in **France**.

Search Probes

Use the **traceroute** command to test the reachability of

- wikipedia.org
- on TCP port 443
- from **20 probes**
- in **France**.

```
ripe-atlas measure
traceroute --protocol TCP
--target wikipedia.org --
port 443 --probes 20 --
from-country fr
```

Questions

Take a Poll!

Which method gives you greater **flexibility** in creating measurements and in looking up results?

Demo C

Installing a RIPE Atlas software Probe

Installing the RIPE Atlas SW Probe

- All info over installing SW probes:
 - <https://atlas.ripe.net/docs/software-probe/>
 - instructions, videos
- Many different platforms
- We will now demo one of them

- <https://atlas.ripe.net/docs/software-probe/>

Good to Know

The (future) host of a RIPE Atlas software probe is expected to:

- Understand what it means to operate a probe for the RIPE Atlas network, including what benefits they themselves gain from this and what services they thereby provide to the RIPE network and its users. You can read more on the [RIPE Atlas about page](#).
- Install the software package that is applicable for their intended target hardware and OS. This software package can come from a variety of sources such as an official repository on GitHub. At the moment the [RIPE NCC maintains a binary RPM package](#).
- Register their probe following the [software probe application](#) procedure.
- Keep the version of their [software up-to-date](#) by upgrading to newer versions as they become available.
- Should the [access credentials for their probe change](#) (for example after having to reinstall a server that runs the software probe), they need to [re-register the new access credentials](#).

Platform Specific Installation Instructions

- <https://atlas.ripe.net/docs/software-probe/>

Platform-specific Installation Instructions

Below you can find help with installing the RIPE Atlas software probes.

Platform	Support	Installation Manuals	Installation Videos
CentOS 7 (binary)	RIPE NCC	English Indonesian	English
CentOS 8 (binary)	RIPE NCC	English Indonesian Arabic	Russian
CentOS 7 & 8 (source)	RIPE NCC	English Indonesian Arabic	Your video here?
Debian 9 (source)		English Indonesian Arabic	Your video here?
Debian 10 (source)		English Indonesian Arabic	English
Raspbian (source)		English Indonesian Arabic	Your video here?
Docker	Community	English (Jamesit) English (Knight1)	English
OpenWRT			
Turris	Vendor (NIC.CZ)	English	English

We are maintaining a [Github repo](#) for manuals in different languages. Please let us know (open an issue, or even a PR) if you'd like to contribute.

DEMO

- We will demo the RIPE Atlas Probe installation on CentOS 7
- <https://atlas.ripe.net/docs/software-probe/>
- Instructions:
<https://github.com/RIPE-NCC/ripe-atlas-probe-doc/blob/master/manuals/CentOS-7-binary.en.md>
- Instruction video: <https://youtu.be/SNecvbNYi20>

Monitoring

Section 4

Question!

- Do you use **network monitoring**?
- If yes, what kind?

Type your answer in the chat window.

Network Monitoring

- Integrate “status checks” with existing monitoring tools (Icinga, Nagios)
- Using **real-time data streaming**
 - Server monitoring
 - Detecting and visualising outages

Steps for Integration

1. Create a RIPE Atlas ping measurement
2. Go to “status checks” URL (RESTful API call)
 - [https://atlas.ripe.net/api/v2/measurements/2340408/status-check?
max_packet_loss=20](https://atlas.ripe.net/api/v2/measurements/2340408/status-check?max_packet_loss=20)
3. Documentation:
 - <https://atlas.ripe.net/docs/api/v2/manual/measurements/status-checks.html>
4. Add your alerts in Nagios or Icinga

Security Aspects

- Probes:
 - Hardware trust material (regular server address, keys)
 - No open ports; initiate connection; NAT is okay
 - Don't listen to local traffic
 - No passive measurements
- Measurements triggered by “command servers”
 - SSH connections from probe to server
 - initiated by probe
- Measurement code published
